

Webinar Recap for January 18th, 2021

LTC+ Acting on Pandemic Learning Together

TOPIC

Essential Together: Family Presence in LTC
Building Canadians' Confidence in COVID-19 Vaccines

KEY AREA(S)

Presence of family
Preparedness

SPEAKER(S)

- Carol Fancott, Director, Patient Partnerships & Engagement, Canadian Foundation for Healthcare Improvement (CFHI)
- Jessie Checkley, Senior Improvement Lead, CFHI
- Dr. Bryna Warshawsky, Medical Advisor, Centre for Immunization and Respiratory Infectious Diseases, Public Health Agency of Canada

SESSION OBJECTIVE(S)

- Share co-created policy guidance to support the reintegration of essential partners during COVID-19 and introduce a new program – Essential Together.
- Share vaccine preparedness resources from PHAC.
- Share LTC+: Acting on Pandemic Learning Together program updates and next steps.

SUMMARY

CFHI – Essential Together

- The presence of caregivers benefits patient safety, experience and outcomes, in addition to benefiting staff morale and experience. The following three fundamental principles help ensure that family presence is a person-centered practice:
 - Differentiate between visitors and essential care partners.
 - Recognize the value of caregivers as essential care partners.
 - Engage with residents, families and caregivers to develop and implement new policies and practices.
- Through ongoing COVID-19 outbreaks, new evidence emerged, highlighting the risks and harms that blanket family restrictions have had on residents, families and healthcare workers. Though organizations understand the importance of family presence as essential care partners, they may struggle to safely reintegrate essential

care partners during the pandemic. In June, CFHI led a policy lab to develop guidance for the Reintegration of Caregivers as Essential Care Partners, as summarized:

- CFHI’s Essential Together Program was launched in December 2020 and supports the implementation of the policy guidance for reintegrating families as essential care partners in health and care settings; involving, an important call to action, the Essential Together tool, learning bundles, peer learning and coaching.

PHAC - Building Canadians’ Confidence in COVID-19 Vaccines

- Health care providers (HCPs) are among the first to be vaccinated for COVID-19 and they play a critical role in instilling the public’s confidence in vaccination. Canadians routinely state that HCPs are their most trusted source of health information.
- HCPs can encourage ‘vaccine confidence’ – helping the public understand the rigour and safety supporting vaccine development and to feel more confident and informed when making the decision to get vaccinated. This will be supported by a largescale public education campaign seen across all provinces and territories
- COVID-19 vaccination is not mandatory for HCPs, however, Dr. Warshawsky noted that “these vaccines are a gift”. It is important to understand and address any concerns or hesitancy regarding vaccination, and to equip HCPs as vaccinators and key influencers. To date, such efforts have included the development of free and accessible training and resources, as well as a web-based healthcare provider toolkit.
- COVID-19 mRNA vaccination by Pfizer and BioNTech are safe and involve the administration of two doses; the second to be administered 42 days after the first dose, though this varies across provinces. There are not yet any known long term side effects of the vaccination, although some allergic reactions have been noted. The first vaccine dose can offers 92% efficacy in protecting against COVID-19 and the second dose raises this protection to 95%. The importance of taking both doses lies in the fact that it is yet unknown how long the protective effects can last after receiving a single dose of the COVID-19 vaccine.

- New to the CFHI website is a webpage dedicated to COVID-19 vaccine preparedness resources for LTC and retirement homes, by which the following is included:
 - Planning guidance for immunization clinics for COVID-19 vaccines.
 - Characteristics, handling, administration of the Pfizer/BioNTech COVID-19 vaccines.
 - Promoting COVID-19 vaccine uptake: Information to guide provider discussions & to inform residents, staff & essential care partners; and to help improve the vaccine experience by reducing pain, anxiety and/or needle fears.
